

# IT Engagement - Enhance Government Tracking Efficiency

Project Title	IT Engagement - Enhance Government Tracking Efficiency
Project Summary	Are you interested in analytics and determining how to artfully visualize data to help find insights? Would you like to work in a team of experts, and support the outreach to customers across a global organization? If so, this is the perfect project for you!
Country	United States

## Project Description

Does helping the Department of State (DOS) be more efficient with their IT resource investment sound like a worthy endeavor?

The Department of State, Office of Information Resource Management has need for intern data analysts to help pull and correlate information from disparate systems to be able to better understand how the Department is using its software and IT assets. In this role you will work with an experienced team to analyze data sources from multiple systems with the goal of getting a more holistic view on how the Department is using its software and technology assets. It will entail using this data to determine opportunities for optimization and then reaching out to stakeholders across the organization to develop plans to reduce unnecessary use of these technology resources.
